## **OPEN LETTER TO DONA CADMAN, MP**

September 14, 2009

Dona Cadman, MP  
Surrey North, BC

Dear Ms Cadman:

We are writing to express to you our deepest thanks and respect for speaking up and stating your opposition to the mining and export of asbestos.

We realize that you are possibly being subjected to great pressure to try to make you back down from your clear, moral stand opposing export of asbestos. We thank you for your courage and integrity in staying firm in your position that Canada should ban asbestos use and export.

The science is irrefutable that chrysotile asbestos (which represents 100% of the asbestos sold in the world today) is a deadly carcinogen that causes mesothelioma and other cancers, as well as asbestosis. Public health authorities in Quebec, across Canada and around the world, as well as U.N. agencies, have all called for an end to the use of chrysotile asbestos since even in a technically advanced, wealthy country like Canada, the evidence is clear that chrysotile asbestos cannot be safely used. For this reason, the Quebec government's National Public Health Institute has, in fact, taken a position opposing the government's policy of increased use of chrysotile asbestos.

Asbestos related disease is the number one occupational killer in Canada. The Canadian Cancer Society has urgently called on Prime Minister Harper to implement the following plan of action in order to help eliminate asbestos related diseases across Canada and around the world:

- Immediately set a clear timetable for phasing out the use and export of asbestos;
- Implement a national surveillance system to track health outcomes of people who have been exposed to asbestos;
- Create a public registry of buildings that contain asbestos;
- Provide transition support for affected communities
- Include chrysotile asbestos on the Rotterdam Convention's list of hazardous substances

Pat Davidson, MP, has publicly stated that she also does not support the government's policy of exporting asbestos. Ms Davidson has publicly stated that, subsequent to her request, Natural Resources minister Lisa Raitt has told her that she will be bringing up the asbestos issue at an upcoming cabinet meeting.

We offer you and Ms Davidson our full support. We would like to work with you both to persuade the government to implement the Canadian Cancer Society plan of action.

We have also written to Ms Davidson informing her of our wish to work with you both on this important public health issue.

We thank you once again for your courageous, compassionate and ethical stand on ending Canada's shameful asbestos policy and look forward to working with you.

Yours sincerely,

Kathleen Ruff, Rideau Institute on International Affairs, on behalf of:
